

SEPTEMBER 10, 2025

CSEC Webinar

Agenda

1. GIS Data Hub 2
 - a. GDH Updates
 - b. MSAG QC Addition
2. Working with Intrado Errors
 - a. Outside Provisioning Boundary
 - b. Address Range Overlaps
 - c. Artifacts
 - d. Edge-matching Moving Forward
3. ALI Record Update Tips
4. Compliance Changes for FY 2026
5. Compliance Info
6. GIS Data Error Reports
7. Q&A

01

GIS Data Hub 2

Updates to GDH Platform

	QC Check Updated	Update Notes
July	Field Comparison	Updated to have clearer messaging about comparison being made as well as values that failed
	ALI to RCL - Rollups	Rollups will automatically merge identical fallouts with the same ALI address and inform you the number of matching ALI records. The summary report will still report total fallouts.
	ALI to RCL	Updated to have clearer messaging
September	Field Order Changeable	Ability to change field order in configuration from original build. Will be reviewing/testing and then likely updating exported data schema to match CSEC schema
	Download Uploaded Data	UI update to include location to download uploaded data. GDH will retain the last 4 uploaded datasets regardless of success or failures.
	SSAP to RCL - Updated Messaging	Extended information now provides "hints" to make it easier to know what to fix (i.e. Address: 9 RHEA MILLS CIR Community: PROSPER ESN: 121 Corresponding RCL Unique ID: uniqueID@nct911.org Ensure a road segment includes the correct address ranges and required attributes for this address point.)

MSAG to RCL Sync Addition

- Added beginning of August
- Checks for ranges, street names, ESN & MSAG community exact matches from MSAG table to RCL layer
 - This includes gaps in ranges as well as the high and low range checks
- Can be used to self-audit your geoMSAG for either Intrado or Motorola RPCs

To have this check configured:

1. Obtain a copy of your MSAG from your provider
2. Include it with your normal upload to GDH
3. Email the csecteam@geocomm.com to configure the MSAG field mapping for QC

Working with Intrado Reported Errors

Working with Intrado Reported Errors

What kinds of errors can you receive?

- Outside Authoritative Boundary
 - EMS
 - Fire
 - Law
 - PSAP
 - SSAP
 - RCL
- Geometry Error
 - EMS
 - Fire
 - Law
 - PSAP
 - RCL
- Boundary Internal Gaps
 - EMS
 - Fire
 - Law
 - PSAP
- Address Range Overlaps
 - RCL

Working with Intrado Reported Errors

Outside Provisioning Boundary

Site Structure Address Point: Make sure point is fully within your Provisioning Boundary

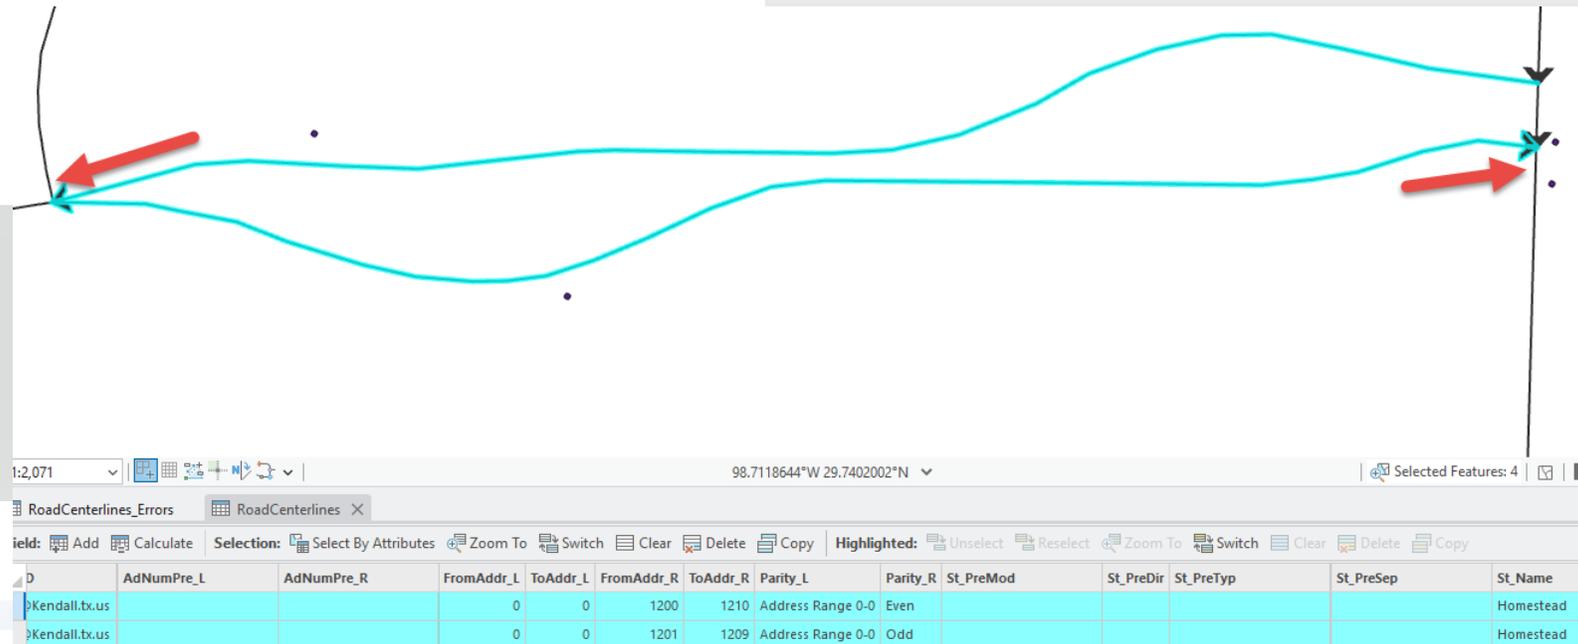

Road Centerlines: If you have received no OAB errors for any polygon layers, they likely are features that need the OAB exception code. Verify that there is a vertex on the Provisioning Boundary for your to snap to.

Fire, Law, EMS, & PSAP: Likely culprit is a moved Provisioning Boundary

Working with Intrado Reported Errors

Address Range Overlaps

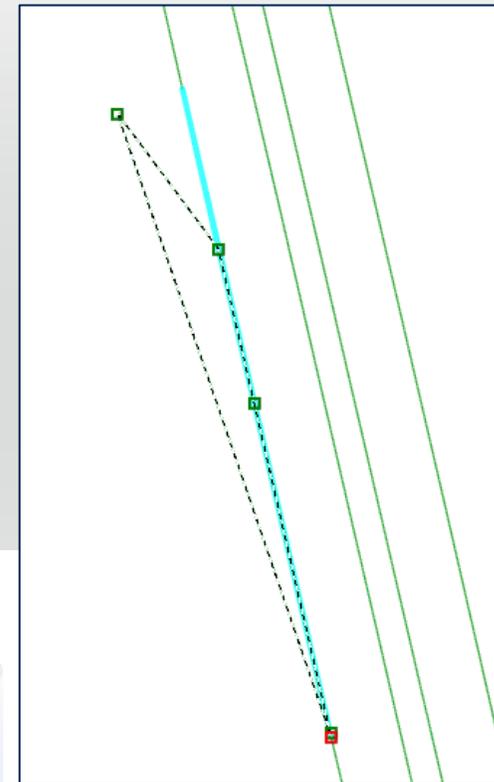

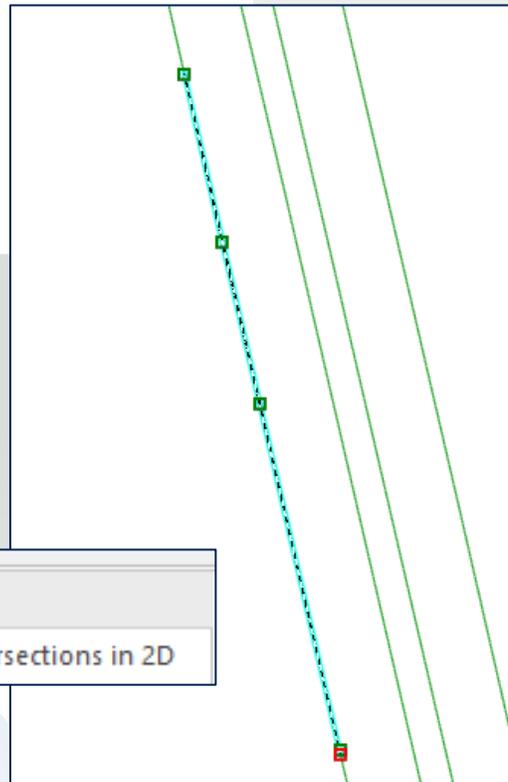

1. Often features that require the ARO code
2. Verify ranges are not actually overlapping
 1. You will often find the road direction for the features is opposite which can cause the false errors in EGDMS
3. Add code to your gcException field

Working with Intrado Reported Errors

Geometry Error

Road Centerlines: Errors appear in their own shapefile named RoadCenterlines_Errors_NULL regardless of geometry issue. Check the last couple fields for details on specific issue. If the shapefile has no geometry, use the RCL UID to locate problem feature

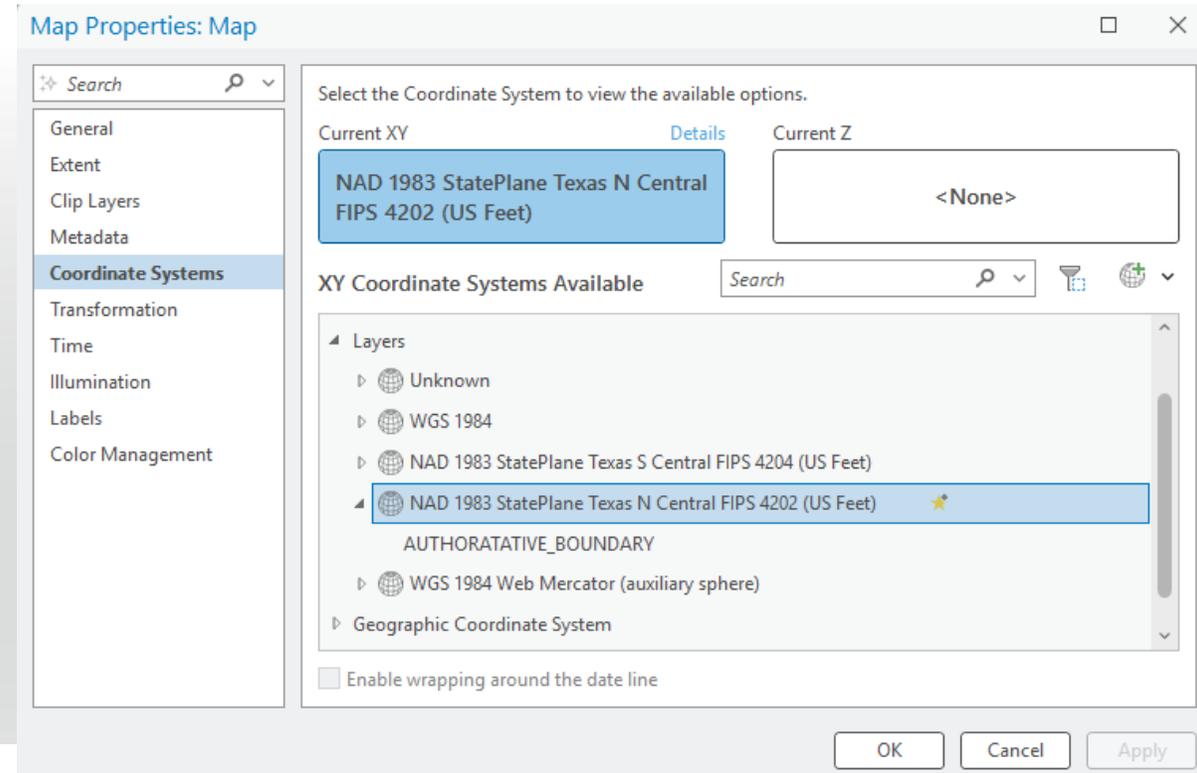

ERRORTYPE	ERRORNAME	REASON
18	Geometry Error	Geometry repair altered geometry: Self-Intersections in 2D

Working with Intrado Reported Errors

Boundary Gaps and Overlaps

If you are seeing sliver gaps and overlaps, the easiest action is to align to your artifacts layer

1. Download your Intrado error files
 - a. You will notice the shapes are shifted from yours because of the shift from State Plane to WGS 1984
2. Determine the correct Transformation to use to reproject those files for alignment
 - a. View the Properties of your Map
 - b. Verify the map's projection is set to your native projection

Working with Intrado Reported Errors

Boundary Gaps and Overlaps

1. In your map view, make sure you are zoomed into an area with an artifact error
2. In the Map Properties, choose Transformation
 - a. You'll see the transformation is the default
 - b. Update the transformation until your polygons align. Typically, it will be one with "Texas" in the name
3. Once you know the transformation, you can reproject the artifact, using that transformation and import them into your .gdb for easier aligning

Working with Intrado Reported Errors

Boundary Gaps and Overlaps

The screenshot displays a GIS application interface. On the left, a map shows a purple rectangular area labeled 'Current Provisioning Boundary' and a yellow rectangular area labeled 'Previously loaded PB'. A green arrow points to the 'Zoom Level' dropdown menu, which is set to 1:14.55. A green box labeled 'Intrado Artifact Error' points to a hatched area on the map. On the right, the 'Map Properties: Map' dialog box is open, showing the 'Transformation' tab. The 'Layer coordinate system' is 'WGS 1984' and the 'Map coordinate system' is 'NAD 1983'. The 'Transformation path' is 'WGS 1984 (ITRF00) To NAD 1983'. The 'Additional transformations' section has an 'Add' button. The 'OK', 'Cancel', and 'Apply' buttons are at the bottom right of the dialog box. The status bar at the bottom shows the scale 1:14.55, coordinates 96.5213443°W 33.7571155°N, and 'Selected Features: 0'.

Working with Intrado Reported Errors

Boundary Gaps and Overlaps

The screenshot shows the 'Map Properties: Map' dialog box with the 'Transformation' tab selected. The 'Layer coordinate system' is set to 'WGS 1984' and the 'Map coordinate system' is 'NAD 1983'. A dropdown menu is open, showing a list of transformation paths. The selected path is 'NAD 1983 To WGS 1984 east Texas 38'.

Layer coordinate system	Transformation path	Map coordinate system
WGS 1984	NAD 1983 To WGS 1984 east Texas 38	NAD 1983
No vertical CS		

Additional transformation options:

- NAD 1983 CSRS To WGS 1984 1 + NAD 1983 To NAD 1983 CSRS 4
- NAD 1983 To WGS 1984 3
- NAD 1983 CSRS To WGS 1984 + NAD 1983 To NAD 1983 CSRS 4
- WGS 1984 (ITRF08) To NAD 1983 2011 + NAD83 to NAD83(2011) 1
- WGS 1984 (ITRF00) To NAD 1983 2011 + NAD83 to NAD83(2011) 1
- NAD 1983 (2011) to WGS 1984 1 + NAD83 to NAD83(2011) 1
- NAD 1983 To WGS 1984 east Texas 38**
- NAD 1983 To WGS 1984 west Texas 39
- NAD 1983 To WGS 1984 Florida 18
- NAD 1983 To WGS 1984 eastern ID MT 19
- NAD 1983 To WGS 1984 2
- NAD 1983 To WGS 1984 OR WA 41
- NAD 1983 To WGS 1984 Michigan 26
- NAD 1983 To WGS 1984 northern California 43
- NAD 1983 To WGS 1984 Nevada 48
- NAD 1983 To WGS 1984 Minnesota 14
- NAD 1983 To WGS 1984 New Mexico 30
- NAD 1983 To WGS 1984 Arizona 32
- NAD 1983 To WGS 1984 New York 31
- NAD 1983 To WGS 1984 southern California 54
- NAD 1983 To WGS 1984 Missouri 15
- NAD 1983 To WGS 1984 Oklahoma 34
- NAD 1983 To WGS 1984 Wisconsin 42
- NAD 1983 To WGS 1984 South Dakota 16

Working with Intrado Reported Errors - Demo

- **Boundary Gaps and Overlaps**
- **Address Range Overlaps**
- **Road Geometry Error**

Edge-matching Moving Forward

- Boundaries must align with neighbors in EGDMS to load PB per Intrade standards
- Previously we had more flexibility in overriding problem areas

Updates to ALI Records

CSEC Program Policy Statements (PPS)

PPS 030: 9-1-1 Database Maintenance

Regional Planning Commission Requirements

An RPC is responsible for ensuring the information contained in the 9-1-1 Database is current, accurate, and complete as defined in CSEC NG9-1-1 GIS Data Standard to enable accurate and timely determination of caller location.

GIS Data Standard

An RPC is required to implement the CSEC NG9-1-1 GIS Data Standard and ensure all required data layers are accurate, complete, and conform to the standard. To demonstrate compliance, an RPC is required to submit GIS data to the Commission (or designated contractor) for evaluation of the RPC's GIS data quality a minimum of once a month

Escalation Process

It is the responsibility of the RPC to escalate its 9-1-1 database errors to the appropriate SP. RPC 9-1-1 Database maintenance plans must include an escalation process which includes appropriate documentation of the error escalation and notice to the Commission prior to escalation with SP.

Tips

1. Resent ALI DR through AT&T/Motorola portal
2. Determine telco and contact them directly
